

## DESCRIPTION

MPI Morheat™ manifold tubular heating elements offer an economical, durable, and adaptable heat source. These elements are often used in milled grooves for hot runner molding systems, where their precise fit ensures optimal heat transfer to the working surface. MPI Morheat can supply pre-formed elements that are ready for installation in your existing channels or new tool designs. Since these heating elements are custom-made, our engineering team will need a detailed drawing or CAD file for design purposes.

## FEATURES

**DIAMETERS:** 0.260", 0.315", 0.330", 0.430", 0.475", 0.495" Inconel & 304SS  
**HEATER WIRE:** 80-20 Nichrome
